FEATURES AND BENEFITS

JANUARY 2018

- Every door is made of structural galvanized steel for a longer door life
- Silicone modified polyester paint finish is used to help prevent paint fade even in extreme weather conditions
- Nyolfelt running strips are installed to provide greaseless operation
- Guide blocks and rollers used for a smooth, quiet operation
- Combination of drum and precision balanced springs, ensuring consistent balance while allowing you to stop the door where you want it and it will stay there
- The springs are designed to exceed the North American standard (8,000 cycles) for garage doors. Ours last roughly 25,000 cycles (est. 19 years of life)
- Soft, pliable bottom seal added to help stop leaves and dust from coming in under the door
- Ultra quiet GDO-8V.3 opener which draws roughly 1 amp of power while operating at only 61 decibels of noise. A conventional garage door opening produces 75-85 decibels of noise!
- The only opener on the market that is IP-24 weather resistant rated. Allowing it to be used for perimeter applications
- S-ALPS (Semi-Automatic Limits Positioning System) that ensures reliable limit setting and maintenance
- Every motorized door comes with two key fob remote transmitters and one inside wall button
- 98% reflective insulation break which is equivalent to R27 when there is a heat source inside the garage
- Warranties: **10 years on the door curtain itself for any fading or cracking of the paint, 2 years on mechanical and electrical components, and 1 year on the install. Same warranties apply for commercial doors, except rather than a 10 year warranty on the door curtain there is a 75,000 cycle warranty**
