- Lack of proper service and maintenance
- Events outside the control of Smart Garage
- Water damage - includes effects from rust, corrosion, salt corrosion

GENERAL CARE FOR YOUR Roll-up-Door

Your coloured steel door has been pre-painted with a silicone modified polyester formulation, which is a very effective paint film to help prevent fading. However good a product may be, all exposed surfaces require some attention to guard against Corrosion and any other harmful atmospheric events.

REGULAR MAINTENANCE REQUIRED:

- Track Guides: Clean internal section of guides with a damp cloth and spray some white lithium grease as needed if you find there is some friction or resistance over time (this likely does not need to occur often)
- Spring Tension: It is natural for springs to lose tension. Should the door become hard to operate or completely inoperable, contact the Smart Garage office. The spring unit is under tension at all times and may cause serious injury if operated by an inexperienced person
